Hi Yakov
You are probably right.
Let them work first before we stick our necks out.
Best
EB

Dear Ehud

The Hungarian company, who is developing a technology for extracting iron from "red mud", a waste material of aluminium production is reluctant to give further information at this stage. They are worried about the propriority rights of the invention. They have already filed for a patent, but it has not yet been approved. Also the fact that they are not providing information directly to somebody who has signed a confidentiality agreement, makes them uneasy. If we can establish a procedure where they can be sure of their rights, I think we can move on.

Yours, Peter Kira
